

JK COVERS

<https://www.customfitprotection.com>

We are a leading manufacturer dedicated to providing comprehensive protective cover solutions, and since 2009, we have been developing and producing high-quality custom car covers, custom car seat covers, motorcycle covers, grill covers and boat covers.

Our core competencies lie in flexible customization services and solid cooperative relationships with well-known European and American automotive brands and manufacturers. By providing OEM products, we have accumulated extensive industry experience and expertise, ensuring our products meet the strictest quality standards and customer demands. In 2015, with the expansion of our business globally, we began offering ODM services and drop shipping, further enhancing our market competitiveness. Our products and services now span multiple countries and regions worldwide, providing customized solutions to clients across the globe.

We commit to providing the highest quality products and services, flexible customization, and timely global delivery to our OEM partners. We look forward to establishing a long-term and stable cooperative relationship with you to explore markets together and achieve mutual success.

Motorcycle Cover Fabric Technical Specification Sheet

(Standard coating, without UV-inhibitor finish)

Fabric Specification	Material / Structure	Weight (GSM)	Waterproof Rating (Water Column)	UV Protection (UPF)	Durability Features	Typical Application
190T	Polyester Taffeta	Approx. 60	1000-2000mm (PU Coating)	Approx. UPF 15-25	Lightweight, soft, packs small; average abrasion resistance.	Short-term dust protection, indoor storage, economy covers.
210D	Oxford Fabric	Approx. 80	2000-3000mm (PU Coating)	Approx. UPF 30-40	Flexible, good tear resistance, cost-effective.	Daily outdoor parking, all-purpose covers.
300D	Oxford Fabric	Approx. 100	3000-5000mm (PU/PVC Coating)	Approx. UPF 40-50	Medium thickness, improved abrasion and wind/sand resistance.	Long-term outdoor parking, areas with wind/dust.
420D	Oxford Fabric	Approx. 140	5000-8000mm (PU/PVC Coating)	Approx. UPF 50+	High-density weave, excellent tear strength and scratch resistance.	Heavy-duty bikes, transportation, harsh weather protection.
600D	Oxford Fabric	Approx. 185	8000-10000mm+ (PU/PVC Coating)	Approx. UPF 50+	Exceptional abrasion and tear resistance, long lifespan, heavier weight.	Professional-grade protection, extreme environments.

Outdoor fabric specification

Johnson E: info@jkcorp.cn M: 86 13386615919

Key Parameter Details

1. Waterproof Rating (Coating Type)

Waterproof performance is measured by Hydrostatic Head (mmH₂O). A higher value indicates better water resistance.

190T / 210D: Typically use PU Coating (1000-3000mm). Resists light to moderate rain and offers some breathability to reduce condensation inside.

300D and above: Often use PVC Coating or heavy-duty PU Coating (5000mm+). Provides excellent protection against heavy rain and prolonged exposure, with less breathability.

2. UV Protection Factor (UPF)

UPF indicates how effectively a fabric blocks ultraviolet radiation.

Baseline Performance (No UV treatment): The inherent UPF depends primarily on fiber density and color. Darker colors and tighter weaves block more UV light naturally, as shown in the adjusted table.

Note on Standards: A fabric is generally considered "UV protective" when UPF > 40 and UVA transmittance < 5%. Without specific treatments, only the heaviest, darkest fabrics (e.g., 420D/600D) may meet this consistently.

3. Fabric Weight & Durability

Fabric Weight (GSM): Grams per Square Meter. Higher GSM correlates with greater thickness, abrasion resistance, and tear strength.

Durability: 600D Oxford offers the highest durability for long-term use, while 190T is suitable for lightweight, temporary protection.

Note on UPF Values: The UPF ratings provided are typical ranges for fabrics with **standard waterproof coating and without specialized UV-inhibitor chemical finishes**. The actual UV blocking performance is highly dependent on **fabric color (darker is better)** and **weave density**. To guarantee a certified high UPF rating (e.g., UPF 50+), an additional UV-resistant coating or treatment is required, which would involve additional cost.

outdoor waterproof bike cover

Large 1, XL 1-2, XXL 2-3 bikes

- Material: ripstop, black, waterproof, and water repellent treated.
- Sack bag
- size: 195*70*100cm (Large)
- 208*76*112cm (X large)
- 208*112*112cm (XX Large)

Choosing the Right Size of Bike Cover

Choosing the right size of bike cover is very important to ensure a great fit and you get the right size of bike cover for your needs. There are different variables to consider, whether that's bike type and size, the number of bikes and how they're going to be stored. Please see our below guide to choosing the right bike cover, the first time.

How to Measure To match the right size bike cover to your bike storage set up, please measure the width, length, and height of your 'whole bike storage set-up'. If using a bike rack, please take into consideration that the bikes will potentially be positioned apart and sometimes in opposite directions (e.g. hitch mounted bike rack).

Side by Side Storage (No Racks)

This is the most common storage method whether storing your bikes inside or outside. Sizing is straightforward, however, please consider type and sizes of bikes.

Floor Standing Rack

There are different types of floor standing racks whether single 'push-in' or traditional floor parking bike rack. When storing two or more bikes in a bike rack they are generally positioned in the same direction and apart. We, therefore, recommend to potentially 'size-up'. For example, if storing two medium or large bikes on a floor parking bike rack, we recommend our XXL size bike cover.

Hitch Mounted Bike Rack

When using a hitch mounted bike rack on either the back of an RV, truck or car we recommend to 'size-up' as mounting bikes on a rack tend to be positioned apart and in opposite directions. For example, if storing 2 medium to large bikes, we recommend our XXL size bike cover.

When 'travelling' we also strongly recommend strapping down the bike cover to reduce potential billowing and to ensure your setup is safe and secure when travelling.

XXL

XL

For 2 bikes

For 1 bike

indoor waterproof bike cover

Half wrap in solid color or full print from custom design

Fitting instructions

(1) Place the cover over the front wheel.

(2) Place the bicycle into the cover.

(3) Pull the cover over the back wheels.

(4) Adjust the top band of the cover.

TIPS: Depending on the bicycle type, it may be easier to attach beginning from the back wheel or by turning the bicycle upside down.
